**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 rejected under 35 U.S.C. 103(a) as being unpatentable over Tino, U.S. Patent No. 5,978,017 in view of Ikeda et al., U.S. Patent No. 5,699,057.

Tino discloses "A structure for mounting cameras on a vehicle"(see FIG. 2) comprising: "a chassis having a predetermined length and extended in a lateral direction"(the rear view mirror/camera assembly, 20, is the supporting structure, or "chassis" for the cameras); "a mounting seat member formed in a center of said chassis"(see 24 of FIG. 2 – the hollow mirror mounting structure, 24 of the rear view member is considered to be a "mounting seat member" formed at the center of the rear view mirror, 20 or "chassis"); "wherein said mounting seat member is fixed onto a predetermined position of a vehicle body so as to mount said pair of cameras on the vehicle body, and portions other than said mounting seat member of the chassis are disposed apart from the vehicle body"(see where "mounting seat member" 24 of the "chassis" 20 is fixed to the camera body in FIG. 5 and since the "chassis" in a rearview mirror, "portions of other than the mounting seat member of the chassis" will apparently be "disposed apart form the vehicle body").

Tino differs from the claimed invention in that only one camera "for making a film of a forward road environment when running"(see 26d of FIG. 2) is disclosed.

Ikeda teaches providing two CCD cameras mounted on a vehicle that record images of objects in front of the vehicle for a warning system (see col. 3, lines 8-24). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the Tino reference and provide two cameras located on both sides of the rear/view mirror/camera assembly that record images of objects in front of the vehicle for a warning system.

***Allowable Subject Matter***

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
